

Optomap® Retinal Exam

At Vision Source we place high priority on maintaining your vision and overall health, which is best-accomplished by evaluating the internal structures of the eye with pupil dilation or the use of **Optomap®** ultra widefield retinal imaging. The former provides a piece-by-piece view for the doctor and results in light-sensitivity and blurry vision for the patient for about four hours. The latter gives a more complete view, as well as a permanent record to track over time, and is a more comfortable experience for the patient. We recommend either procedure at least every other year for patients under the age of 50, and every year after that. Those with diabetes, macular degeneration, and other conditions that affect the retina should have their eyes dilated or have **Optomap®** imaging performed every year.

Cost:

Adults (ages 16 & up) \$35

Children (ages 15 & under) \$25

Yes, I would like the Optomap.

No, not at this time.
